Privacy Threshold Analysis
for the
Patent Capture and Application Processing System – Initial Processing (PCAPS-IP)
U.S. Department of Commerce Privacy Threshold Analysis

Patent Capture and Application Processing System – Initial Processing (PCAPS-IP)

Unique Project Identifier: [PTOP-006-00]

Introduction: This Privacy Threshold Analysis (PTA) is a questionnaire to assist with determining if a Privacy Impact Assessment (PIA) is necessary for this IT system. This PTA is primarily based from the Office of Management and Budget (OMB) privacy guidance and the Department of Commerce (DOC) IT security/privacy policy. If questions arise or further guidance is needed in order to complete this PTA, please contact your Bureau Chief Privacy Officer (BCPO).

Description of the information system and its purpose: Provide a general description of the information system in a way that a non-technical person can understand.

The E-Government Act of 2002 defines “information system” by reference to the definition section of Title 44 of the United States Code. The following is a summary of the definition: “Information system” means a discrete set of information resources organized for the collection, processing, maintenance, use, sharing, dissemination, or disposition of information. See: 44. U.S.C. § 3502(8).

PCAPS-IP is an Application information system, and provides support to the United States Patent and Trademark Office (USPTO) for the purposes of capturing patent applications and related metadata in electronic form, processing applications electronically, reporting patent application processing and prosecution status, and retrieving and displaying patent applications. PCAPS-IP is comprised of multiple Automated Information Systems (components) that perform specific functions, including submissions, categorization, metadata capture, and patent examiner assignment of patent applications. PCAPS-IP users include both internal USPTO personnel as well as the public.

Application Routing Tool (ART): Supports an automated system that provides a suggested routing location for new patent applications that have been successfully scanned into the Patent Application Services and Security (PASS) database. The system does not collect, process or transmit sensitive PII.

Checker (Checker): Enables public users to check sequence listings before submission to the USPTO. The Checker system validates patent applications in compliance with 37 Code of Federal Regulations (CFR) 1.821 – 1.825 for both ‘old rules’ (October 1990) and ‘new rules’ (July 1998). The system does not collect, process or transmit sensitive PII.

Enterprise Application Integration (EAI) Hub - (EAI Hub): Supports the USPTO’s e-Government strategy and provides a framework for various loosely coupled Automated Information Systems (components) to share information and services across their heterogeneous
environments with minimal or no changes to the existing applications. The system does not collect, process or transmit sensitive PII.

**Electronic Filing System - Web (EFS-Web):** Provides a simple, safe, and secure method for e-filers to submit patent application documents as PDF files over the Internet to the USPTO. The system does collect, process or transmit sensitive PII.

**Patent Application Services and Security (PASS):** Provides the capability to use electronic images of patent applications to support USPTO operations. The system does not collect, process or transmit sensitive PII.

**PatentIn:** Allows patent applicants to generate nucleic and amino acid sequence listings. PatentIn does not connect to USPTO. The PatentIn application runs locally on the user’s personal computer. The system does not collect, process or transmit sensitive PII.

**Patent Application Location Monitoring Pre Examination (PALM Pre-Exam):** Supports the prosecution and related administrative functions of a patent application through its life cycle, and also tracks, monitors, and reports on the prosecution status of patent applications. The system does collect, process or transmit sensitive PII.

**Patent Application Location Monitoring - Reporting System (PRS):** Produces many productivity and statistical reports that are crucial to the Patents Corps business operation. The PRS processes and delivers reports to Patents Corp, supporting various PALM subsystems and business areas. The system does collect, process or transmit sensitive PII.

**Infrastructure Code Table – (ICT):** The ICT system provides the validation of a given geographic region with a specified country, and provides a list of current countries and geographic regions. ICT provides the standard PTO country codes for patent applications. The system does not collect, process or transmit sensitive PII.

a) **Whether it is a general support system, major application, or other type of system**
   
   Major application

b) **System location**
   
   600 Dulany Street, Alexandria, VA  22314
c) Whether it is a standalone system or interconnects with other systems (identifying and describing any other systems to which it interconnects)

Interconnects with other systems:

**PSS-PS (Patent Search System – Primary Search and Retrieval):** PSS-PS is a Master system portfolio consisting of multiple Automated Information Systems (AIS). PSS-PS supports legal determination of prior art for patent applications, including text and image search of repositories of US application and grant publications, Foreign application and grant publications, various concordances, and non-patent literature. It represents the databases that contain the images and text data for US patent grants, published applications, and unpublished applications.

**Patent Capture and Application Processing System – Examination Support (PCAPS-ES):** PCAPS-ES is a master system that provides a comprehensive prior art search capability and the retrieval of patent and related information, which comprise text and images of United States (US), European Patent Office (EPO) and Japan Patent Office (JPO patents), US pre-grant publications, Derwent data and IBM Technical Disclosure Bulletins.

**Revenue and Account Management (RAM):** RAM is master system that collects fees for various USPTO goods and services related to intellectual property and the protection of intellectual property rights.

**Reed Technology and Information Services (RTIS) Patent Data Capture (PDCap)/SERCO Patent Processing System (PPS):** RTIS is an off-campus contractor system that captures critical fields from applicants’ applications so that they are pre-loaded into an index file to reduce examiners and public search times. SERCO PPS is a contractor system that receives information from USPTO so that inventory, identification and classification activities can be performed on patent applications.

**World Intellectual Property Organization (WIPO) / Foreign Patent Offices** is a United Nations (U.N.) agency charged with protecting intellectual property (IP) by working with worldwide organizations to establish international classifications.

d) The purpose that the system is designed to serve

PCAPS-IP supports the prosecution of patent applications.

e) The way the system operates to achieve the purpose
PCAPS-IP has a website Electronic File System-Web (EFS-Web) whereby applicants are able to submit applications online. PCAPS-IP has other applications for applicants to use in verifying portions of their patent application before it is officially filed (Checker, PatentIn). Once the application is electronically filed the application is uploaded and then routed through electronic security and formalities review system (PASS). Once the application is perfected an initial classification is automatically determined which is then used to route the application to the proper Technology Center for examination.

f) A general description of the type of information collected, maintained, use, or disseminated by the system
PCAPS-IP does not capture sensitive-PII. However, the information collected is of the public (U.S. and foreign), Federal employees. Public data is used to file and manage Patent applications. Federal employee data is used internally for Patent examiner work, management of Federal employees, and the management of the IT systems that support the USPTO.

g) Identify individuals who have access to information on the system
Public, USPTO patent examiners, USPTO patents and contractor employees, system administrators

h) How information in the system is retrieved by the user
Registered patent applicants are provisioned unique user accounts to facilitate subsequent secure logins for their application status and update submissions. Patent examiners are granted access only the patent application has been assigned to them.

i) How information is transmitted to and from the system
HTTPS is used for all data transmissions to and from the Internet, USPTO DMZ, and PTOnet. A dedicated socket is used to perform encryption and decryption.
Questionnaire:

1. What is the status of this information system?

☐ This is a new information system. Continue to answer questions and complete certification.

☐ This is an existing information system with changes that create new privacy risks. Complete chart below, continue to answer questions, and complete certification.

☐ Changes That Create New Privacy Risks (CTCNPR)

☐ This is an existing information system in which changes do not create new privacy risks, and there is not a SAOP approved Privacy Impact Assessment. Continue to answer questions and complete certification.

☐ This is an existing information system in which changes do not create new privacy risks, and there is a SAOP approved Privacy Impact Assessment (version 01-2015 or later). Skip questions and complete certification.

2. Is the IT system or its information used to support any activity which may raise privacy concerns?

NIST Special Publication 800-53 Revision 4, Appendix J, states “Organizations may also engage in activities that do not involve the collection and use of PII, but may nevertheless raise privacy concerns and associated risk. The privacy controls are equally applicable to those activities and can be used to analyze the privacy risk and mitigate such risk when necessary.” Examples include, but are not limited to, audio recordings, video surveillance, building entry readers, and electronic purchase transactions.

☐ Yes. Please describe the activities which may raise privacy concerns.

☒ No

3. Does the IT system collect, maintain, or disseminate business identifiable information (BII)?

As per DOC Privacy Policy: “For the purpose of this policy, business identifiable information consists of (a) information that is defined in the Freedom of Information Act (FOIA) as “trade secrets and commercial or financial information obtained from a person [that is] privileged or confidential.” (5 U.S.C.552(b)(4)). This information is exempt from automatic release under the (b)(4) FOIA exemption. “Commercial” is not confined to records that reveal basic commercial operations” but includes any records [or information] in which the submitter has a commercial interest* and can include information submitted by a nonprofit entity, or (b) commercial or other information that, although it may not be exempt from release under FOIA, is exempt from disclosure by law (e.g., 13 U.S.C.).”
☐ Yes, the IT system collects, maintains, or disseminates BII about:  *(Check all that apply.)*

- Companies
- Other business entities

☐ No, this IT system does not collect any BII.

4. Personally Identifiable Information

4a. Does the IT system collect, maintain, or disseminate personally identifiable information (PII)?

As per OMB 07-16, Footnote 1: “The term ‘personally identifiable information’ refers to information which can be used to distinguish or trace an individual’s identity, such as their name, social security number, biometric records, etc... alone, or when combined with other personal or identifying information which is linked or linkable to a specific individual, such as date and place of birth, mother’s maiden name, etc...”

☐ Yes, the IT system collects, maintains, or disseminates PII about:  *(Check all that apply.)*

- DOC employees
- Contractors working on behalf of DOC
- Members of the public

☐ No, this IT system does not collect any PII.

*If the answer is “yes” to question 4a, please respond to the following questions.*

4b. Does the IT system collect, maintain, or disseminate PII other than user ID?

☐ Yes, the IT system collects, maintains, or disseminates PII other than user ID.

☐ No, the user ID is the only PII collected, maintained, or disseminated by the IT system.

4c. Will the purpose for which the PII is collected, stored, used, processed, disclosed, or disseminated (context of use) cause the assignment of a higher PII confidentiality impact level?

Examples of context of use include, but are not limited to, law enforcement investigations, administration of benefits, contagious disease treatments, etc.
☐ Yes, the context of use will cause the assignment of a higher PII confidentiality impact level.

☒ No, the context of use will not cause the assignment of a higher PII confidentiality impact level.

If any of the answers to questions 2, 3, 4b, and/or 4c are “Yes,” a Privacy Impact Assessment (PIA) must be completed for the IT system. This PTA and the approved PIA must be a part of the IT system’s Assessment and Authorization Package.
CERTIFICATION

☒ I certify the criteria implied by one or more of the questions above **apply** to the Patent Capture and Application Processing System - Initial Processing (PCAPS-IP) and as a consequence of this applicability, I will perform and document a PIA for this IT system.

☐ I certify the criteria implied by the questions above **do not apply** to the Patent Capture and Application Processing System - Initial Processing (PCAPS-IP) and as a consequence of this non-applicability, a PIA for this IT system is not necessary.
